

Sogliano
Ambiente

We turn waste into resources
while protecting the environment.

Sogliano Ambiente.

From waste we reap only advantages.

Sogliano Ambiente is the ideal partner for transforming the problem of waste into an opportunity for growth and economic development.

Because we have consolidated experience in waste treatment and disposal and work to upgrade and recover both materials and energy.

Because we have the expertise to design and build new plants employing the most innovative technologies.

Because we have gained the competence and professionalism to guarantee high degrees of environmental compatibility, certified by the most stringent international control bodies.

Because we have demonstrated our seriousness, precision, professionalism with years of impeccable service for domestic customers.

And all without losing sight of our fundamental ethics, first and foremost focusing on respect for people and the environment in which we live.

More than a decade dedicated to protecting the environment.

Sogliano Ambiente was founded in December 1996 to manage the “Ginestreto” urban and

special waste landfill owned by the town of Sogliano al Rubicone.

This first experience enabled us to extend our activities to other plants within the provincial territory and even beyond.

The professionalism we have accrued and our focus on technological innovation has enabled us to generate electricity from waste, acquiring contracts for the management of some plants in Italy.

To guarantee effective operation of the corporate organization, we have laid out the roles, responsibilities, duties and relationships of all our personnel. This organizational structure is geared to developing and controlling all activities, from those having an impact on the environment to the quality of the services provided.

Today we are a modern service company able to compete in the field of waste recovery, treatment and disposal, working both in Italy and on the international scene.

Our services

Plant design and construction

We design and build modern waste disposal plants and related services including shredding-screening plants, crushing plants and plants to stabilize urban and special waste. Moreover, our project financing makes it possible to recover the capital invested through management or operation of the plants built.

Waste disposal

Our plants have the potential to dispose of 170,000 tons of non-hazardous waste per year.

Waste transport

Through our subsidiary, Sogliano Ambiente Trasporti srl, we ensure prompt, safe transport of waste to the treatment, recovery and disposal facilities.

quality guarantee

Recovery of materials from waste

We design and build waste recovery and treatment plants. We manage a 40,000 t/yr urban and special waste recovery plant.

Stabilization plant

We are building a plant for anaerobic and dry aerobic stabilization of the wet fraction of urban and special waste coming from separated waste collection or mechanical separation. This plant is designed to recover energy and materials.

Energy from waste

We design, build and manage electricity generation plants powered by recovered biogas and producing an average 49,500 MWh of electricity annually.

We have everything we need to guarantee the best possible service.

Day in and day out, Sogliano Ambiente performs its work in the open for all to behold. This is why our work is based on such principles and values as transparency, clarity, reliability and credibility. To ensure that these aims are achieved, in full compliance with current law and business ethics, on May 3, 2007 the Sogliano Ambiente S.p.A. Board of Directors approved the **Organizational and Management Model as per It. Leg. Dec. 231/01** and the related **"Code of Ethics"**.

Moreover, we know full well that our activities must pursue increasingly high levels of environmental protection. In fact, we base plant management on choices that enable us to achieve the environmental protection goals we share with public and private stakeholders. Likewise we place fundamental importance on communication with the outside on the environmental impact our activities have. We work to raise the awareness of the stakeholders (the general population, control bodies, users and suppliers) regarding the solutions chosen. For this reason we have obtained the following certifications:

Membership in the National Register of Waste Management Companies - Emilia Romagna regional section.

- Waste Transport (CAT 1D, 4C and 5F);
- Contaminated site clean-up (CAT. 9D).
- Management of plants owned by third parties.

Qualification to perform public works (design and construction services) for the following categories:

- **OG9** electrical power generation plants;
- **OG12** clean-up and environmental protection works and plants;
- **OS14** waste disposal and recovery plants certified by SOA NORDEST Spa.

Certified integrated environment/ quality system

- Registration, according to **Reg. CE/761/01 (EMAS)**, of the activities involved in managing the Ginestreto landfill in Sogliano al Rubicone, the related electricity generation plant run with recovered biogas and the waste sorting and treatment plant. Registration was received in 2002.
- **UNI ISO 14001** certification of the activities involved in managing construction and operation of the Ginestreto landfill in compliance with the permits, including biogas power recovery through in-landfill collection and electrical power generation using internal combustion engines. Sorting and treatment of non-hazardous waste at the Ginestreto site. Design, construction and operation of third party landfills for the disposal of non-hazardous waste and non-hazardous waste recovery plants. Design, construction and management of proprietary and third party biogas-powered electricity generation plants. Certification was received in 2002.
- **UNI ISO 9001** certification of the design, construction and management of landfills, recovery plants and biogas-powered electricity generation plants. Management of plants for sorting, treatment and marketing of non-hazardous waste. Certification was received in 2004.

Worker health and safety management

In addition to environmental protection, we consider the health and safety of our workforce to be an essential part of our job. This is why Sogliano Ambiente has implemented an **OHSAS 18001:2007** compliant certification procedure.
